TECHNICAL SKILLS

Programming:	Java, Python, JavaScript, HTML, PHP, CSS, Bash, XML
Test Automation:	Selenium, ReadyAPI, TOSCA (beginner), Cucumber, TestComplete, Rest Assured, Maven
Database:	SQL (Oracle, MS SQL Server), MongoDB
Containerization:	Docker
Version Control & CI/CD:	Azure DevOps, Git, Bitbucket, Jenkins, GitHub Actions
Testing & Quality Assurance:	ISTQB Fundamentals, Manual & Automation Testing, API Testing (Postman), Test Case Management (JIRA)
Software Development:	OOP, Multithreading, Design Patterns (SOLID, Clean Code), Logging, Functional Programming (Lambdas, Streams), Test-Driven Development, Static Code Analysis (SonarLint)

WORK EXPERIENCE

IT Consultant – Automation Engineer

FDM Group

Sept 2024 – Present

Toronto

At FDM Group, working for Equitable life of Canada and worked for TD Bank as the end client, these roles involved performing manual and automation testing with Selenium, Cucumber, ReadyAPI and TestComplete.

- Designed and executed test plans, creating detailed test collateral reports, including test conditions, execution schedules, test cases, defect reports, and test closure reports.
- Performed manual testing, identifying 23+ defects through exploratory and regression testing to maintain application stability.
- Developed and maintained automated test scripts using Selenium (POM) and Cucumber (BDD), reducing manual effort by 30% where implemented synchronization techniques (Waits) and Action Classes to enhance test stability and improve UI test coverage.
- Conducted API testing using Postman, ReadyAPI, Rest Assured, ensuring 98% test coverage on critical API endpoints and validating both functional and security aspects.
- Enhanced reporting by implementing Extent Reports, generating structured execution logs, and attaching screenshots for better defect tracking.
- Tested and interacted with iframes and Shadow DOM elements to ensure seamless user experience across encapsulated components.

Quality Assurance Engineer Intern

Syzy Technologies

Jan – Aug 2024

Remote

At Syzy Technologies, I acted as the point of contact between teams, managed bug lifecycles, conducted manual and automated testing, and provided test reports

- Acted as the primary point of contact (POC) between the development and testing teams in India and the U.S., facilitating seamless collaboration across 3+ time zones for 2+ clients, reducing turnaround time for issue resolution by 40%.
- Led the manual testing process by conducting thorough verification of web applications, identifying issues, and ensuring functionality met client expectations.
- Managed the complete bug lifecycle using JIRA and Confluence, tracking and resolving 95% of defects within SLA, ensuring timely feedback and clear documentation for faster issue resolution.
- Developed and executed automated test scripts using Selenium and JUnit, improving testing efficiency and reducing manual effort while enhancing test coverage.
- Delivered comprehensive test reports to stakeholders, providing insights into defect trends, testing progress, and quality metrics, ensuring transparency and informed decision-making.

Senior Systems Engineer

Infosys Limited

Oct 2020 – June 2022

Bangalore, IN

At Infosys Limited, this role involved conducting comprehensive testing and validation of Sterling Integrator B2B processes, managing Microsoft patching activities

- Awarded a certificate of appreciation for outstanding performance and exceptional teamwork skills, showcasing strong communication, problem-solving, leadership, and collaboration skills
- Conducted thorough testing of Sterling Integrator B2B processes, schedules, and services, identifying and troubleshooting 50+ integration issues, ensuring smooth and error-free data flow across systems
- Led the validation of Microsoft Patching activities on Sterling Integrator Production Servers, ensuring 99.5% system uptime by performing pre- and post-maintenance checks and minimizing downtime
- Created and executed test cases for critical business processes within the Sterling Integrator environment, ensuring that all system integrations functioned as expected after server maintenance and updates.
- Coordinated testing efforts across internal teams, validating system performance, data integrity, and application uptime, ensuring 100% issue resolution before re-enabling schedules.

Web Developer Intern

Infosys Limited

Jan 2020 – Apr 2020

Mysore, IN

At Infosys Limited, this role involved developing end-to-end web applications using Angular, Node.js, and Spring Boot, integrating advanced Java features and writing unit tests with JUnit and Mockito

- Developed end-to-end web applications using Angular, Node.js, and Spring Boot, following Agile principles for iterative development.
- Developed and integrating lambdas, streams, and multithreading in various Java applications, while following best practices for logging and exception handling
- Worked on advanced SQL, data management, and AI integration techniques, while ensuring efficient use of design patterns and proficient handling of file I/O and JSON
- Wrote unit tests using JUnit and Mockito for both front-end validation and back-end logic to ensure code reliability and functionality.

TECHNICAL PROJECTS

Canadian Tire Automation Project 🔄

Selenium, Cucumber, Action class, XPath Axes, Extent Reports, Apache POI, Maven

- Automated the testing of Canadian Tire's website using Selenium and Cucumber, focusing on critical features like store location, add-to-cart functionality, winter tire selection, and user login.
- Developed feature files and step definitions for BDD, improving test readability.
- Utilized Extent Reports for detailed reporting, capturing screenshots of test execution for visual validation of results.
- Integrated Apache POI for reading and writing data from Excel sheets, enabling dynamic test data handling for the automation scripts.

Best Buy Automation Project 🔄

Selenium, Cucumber, Maven

- Automated testing of the Best Buy website's sign-in, cart, and phone activation using Selenium and Cucumber.
- Developed Scenario Outlines to handle various test cases, including invalid email and password formats, ensuring proper validation and error handling on the sign-in page.
- Utilized JavaScriptExecutor to handle dynamic elements and perform actions like scrolling, ensuring smooth interaction with the web page.
- Implemented Explicit and Implicit Waits to handle synchronization issues and ensure elements are fully loaded before interacting with them, improving test stability.
- Published detailed Cucumber test reports after each test run to provide clear visibility of test results and identify any failed scenarios.

API Testing Project 🔄

RestAssured, Cucumber, Hamcrest, JSON, Java

- Published detailed Cucumber test reports after each test run to provide clear visibility of test results and identify any failed scenarios.
- Automated API testing for GET, POST, PUT, and DELETE requests on Foods, Managers, and Comments endpoints.
- Validated JSON responses, status codes, headers, and dynamic data using Hamcrest assertions.
- Implemented comprehensive test scenarios to ensure data integrity and correct response structures.
- Utilized Cucumber BDD for step definitions and test execution, generating detailed Cucumber reports.

EDUCATION

Master's in engineering - Software Engineering, Concordia University, Montreal, QC

September 2022 - April 2024

Bachelor of Technology - Computer Science and Engineering, SRM Institute of Science and Technology, IN **July 2016 - May 2020**
